

- Breeds in area.
- C** Common: Unlikely to be missed in suitable habitat.
- FC** Fairly Common: Includes locally common as well as irruptive species; some species may only be present in numbers for part of the season.
- U** Uncommon: A very broad category that includes residents that are present but usually hard to find, and migrants that may only be present for short periods of time.
- R** Rare: At best, one sighting per season; gaps in occurrence may extend over many years.
- Wi** Winter: December, January, February.
- Sp** Spring: March, April, May
- Su** Summer: June, July
- Fa** Fall: August, September, October, November

• Evening Grosbeak	FC	FC	U	FC
<u>OLD WORLD SPARROWS</u>				
• House Sparrow	C	C	C	C

This checklist will be most useful to those who understand the critical relationship between particular birds and suitable habitat. Additionally, a number of breeding and migratory species have extremely limited ranges. The 5,351 foot difference between the area's highest and lowest points offers birds and birders a variety of unique ecosystems. The order of families and individual species included in this checklist, as well as months within each season, conforms to the standards of the American Ornithological Union and its Checklist of North American Birds.

Sightings of unlisted species and those designated as R (rare) warrant documentation. Observers are encouraged to send their reports with complete details to: New Mexico Bird Records Committee, 1819 Meadowview Dr. NW, Albuquerque, NM 87104. Accompanying audio, video, and photograph evidence is most desirable, but not returnable. Two sources for current information about Colfax County and statewide bird sightings are: (1) the New Mexico Rare Bird Alert (NMRBA) at 505-884-3269, and (2) www.birder.com (select Birding, then select Rare Bird Alert, then scroll down to New Mexico on the menu). You can also report your unusual sightings at the NMRBA or email pinyonjay@aol.com.

This checklist is an excerpt from a list compiled and updated by David J. Cleary of Maxwell, NM for Colfax County. Special thanks to Sartor O. Williams III and Christopher Rustay for their extensive input on various aspects of the checklist. Typing by Agnes Gibson.

BIRD Checklist

for MORENO VALLEY & CIMARRON CANYON NEW MEXICO

Highest Point: 12,441 ft. Baldy Mountain
 Lowest Point: 7,090 ft. at Ute Park
 Number of documented bird species: 176

KEY PUBLIC ACCESS LOCATIONS

Carson National Forest
 Cimarron Canyon State Park
 Eagle Nest Lake State Park
 Monte Verde Lake
